.30

計画を作成中...

Deep Research は、従来の AI 検索よりも高度な情報理解と分析能力を持ち、複雑なテーマや専門的な内容について深く掘り下げて調査・解説を行う手法であり、従来の検索はキーワードに基づく表層的な情報収集に留まるのに対し、Deep Research は文脈や背景知識を駆使して、より精緻で包括的な知見を提供する点に大きな違いがあります。

I am creating a comparison table to highlight the differences between Deep Research and traditional AI search methods, focusing on aspects like search approach, depth of information processing, response time, and application fields. This detailed comparison will help clarify the advantages and characteristics of each method.

I am creating a horizontal bar chart to visually compare the capabilities of Deep Research and traditional AI search across 10 key features. The chart will highlight the strengths of each approach, with Deep Research excelling in most areas, while also illustrating the differences in processing time. Using distinct colors and Japanese labels will make the chart both informative and visually appealing.
